

Environmental Policy

THE INDIUM CORPORATION IS GLOBALLY COMMITTED to compliance with all applicable Federal, State and Local environmental regulations as a minimum. Where appropriate, we will strive to go beyond.

We will be a responsible member of the communities in which we work. As we strive for improvements in our business, we will remain mindful of the impact we have on the global environment.

We will continuously strive to reduce emissions to air, land and water. Programs such as waste minimization through reduction, recycling and reuse are an important aspect of the entire company. We will continue to explore technically feasible and economically practical methods to help us make a positive impact on the environment. Hazard communications (Haz-Com) training and hazardous waste training is mandatory for all affected employees. Employees are also encouraged to recycle and/or reuse non-hazardous materials such as cardboard, newspapers, glass, plastics, wood and scrap metals. Other materials such as used batteries, used light bulbs and obsolete computer equipment classified as waste shall be recycled in accordance with governmental regulations and allowances.

We maintain controls including period reviews to ensure that our policies and procedures are effective and being followed, making improvements where and when needed.
